Hi,

Calendar Week 38: Here is test result summary for Linaro Android platform on following boards:

- 1) ARM Versatile Express A9
- 2) ST-Ericsson Snowball Board
- 3) TI Panda Board 4430
- 4) TI Panda Board 4460
- 5) Samsung Origen Board

**Synopsis: Device-tree blob is still missing from Vexpress-A9. Ethernet is working fine on Panda 4430 & 4460 now but wifi is still an issue. Snowball and origen boards have similar results from last few weeks, no major issue on origen after target switched from stable branch to tracking branch, build tool chain for origen has been switched to 2012.09 version.**

Detail Report for all the boards:

### 1. ARM Versatile Express A9 - Android (Column H)

Things look the same after 12.08 release. Ethernet is automatically configured and adb-usb is working fine. Other features are all the same from last few week testing.

### 3) TI Panda Board 4430 - Android(Column Y)

For Origen Tracking build this week, there is no significant difference, except now we can wake up the board

from suspend by press "BACK" hard key. Also, the build tool chain has been switched to 2012.09 version. All the other features remain the same status as last week.
